Patient is stable on current drug(s); high risk of significant adverse clinical outcome with medication change A specific explanation of any anticipated significant adverse clinical outcome and why a significant adverse outcome would be expected is required – e.g. the condition has been difficult to control (many drugs tried, multiple drugs required to control condition), the patient had a significant adverse outcome when the condition was not controlled previously (e.g. hospitalization or frequent acute medical visits, heart attack, stroke, falls, significant limitation of functional status, undue pain and suffering),etc.

Medical need for different dosage form and/or higher dosage [Specify below: (1) Dosage form(s) and/or dosage(s) tried and outcome of drug trial(s); (2) explain medical reason (3) include why less frequent dosing with a higher strength is not an option – if a higher strength exists]
