

**betibeglogene autotemcel (Zynteglo)****Medical Benefit Drug Policy**Place of Service

Hospital Administration

**Drug Details****USP Category:** GENETIC OR ENZYME OR PROTEIN DISORDER: REPLACEMENT, MODIFIERS, TREATMENT**Mechanism of Action:** Autologous hematopoietic stem cell-based gene therapy containing transgene that encodes for  $\beta$ A-T787Q-globin.**HCPCS:**

J3393:Injection, betibeglogene autotemcel, per treatment

**How Supplied:**

- Provided as a single dose for infusion containing a suspension of CD34+ cells in one or more (up to 4) infusion bags. The minimum recommended dose of ZYNTGLO is  $5.0 \times 10^6$  CD34+ cells/kg.
- Zynteglo is shipped from the manufacturing facility to the treatment center storage facility in a cryoshipper, which may contain multiple metal cassettes intended for a single patient.

**Condition(s) listed in policy** (*see coverage criteria for details*)

- Transfusion-Dependent Beta-Thalassemia (TDT)

Any condition not listed in this policy requires a review to confirm it is medically necessary. For conditions that have not been approved for intended use by the Food and Drug Administration (i.e., off-label use), the criteria outlined in the California Code of Regulations (CCR), Title 22, Section 51303 and 51313 must be met.

**Special Instructions and Pertinent Information**

Provider must submit documentation (such as office chart notes, lab results or other clinical information) to ensure the member has met all medical necessity requirements.

The member's specific benefit may impact drug coverage. Other utilization management processes, and/or legal restrictions may take precedence over the application of this clinical criteria.

**Coverage Criteria****The following condition(s) require Prior Authorization/Preservice.****Transfusion-Dependent Beta-Thalassemia (TDT)****Meets medical necessity if all the following are met:**

1. Transfusion dependence, defined as at least 8 transfusions of packed red blood cell (pRBC) in previous 12 months
2. Both of the following:

- a. Patient  $\leq 50$  years of age
- b. If  $< 5$  years of age: minimum weight of 6 kg, and able to provide minimum number of cells to perform apheresis (e.g., needed to manufacture product)
3. Patient is clinically stable and eligible to undergo myeloablative conditioning before infusion of Zynteglo
4. White blood cell (WBC) count  $\geq 3 \times 10^9 /L$
5. Platelet count  $\geq 100 \times 10^9 /L$  (unless related to hypersplenism)
6. Patient is negative for HIV-1, HIV-2, hepatitis B virus (HBV), and hepatitis C virus (HCV)
7. Patient does not have any of the following:
  - a. Uncorrected bleeding disorder
  - b. Any prior or current malignancy (with the exception of adequately treated cone-biopsied in situ carcinoma of the cervix uteri and basal or squamous cell carcinoma of the skin)
  - c. History of major organ damage (e.g., advanced liver disease, cardiac T2  $< 10$  ms by MRI)
  - d. Severe iron overload that warrants exclusion in the provider's opinion

#### **Covered Doses:**

Up to four infusions bags, which contain 2.0 to  $20 \times 10^6$  cells/mL, as a single-dose intravenous (IV) infusion

#### **Coverage Period:**

One-time treatment per lifetime

#### **ICD-10:**

D56.1
