How to Improve HEDIS® Scores

- Review diabetes services needed at each office visit.
- Order labs prior to patient appointments.
- If point-of-care HbA1c tests are completed in-office, it is helpful to bill for this. Also, ensure that the HbA1c result, and date of test is documented in the chart.
- Adjust therapy to improve HbA1c and BP levels; follow-up with patients to monitor changes.
- A digital eye exam, remote imaging, and fundus photography can count if the results are read by an eye care professional (optometrist or ophthalmologist).
- Use CPT II 3072F if the eye exam was negative or showed low risk for retinopathy in the prior year.
- Request a focused list of members who need Diabetes Care from your Blue Shield Promise Quality Program Manager.
